SECTION 1

Message from the University*Institutional vision and commitment*

The Apollo University was established in 2021 with a singular conviction: that education in the health sciences must be inseparable from research, service, and human compassion. As an initiative of the Apollo Hospitals Group — operating under the Apollo Hospitals Educational and Research Foundation (AHERF) — the University positions itself as a multidisciplinary institution in which clinical excellence, technology, and academic rigour meet, preparing graduates who are equally comfortable at a laboratory bench, a hospital bedside, or a data dashboard.

This lineage gives the University a distinctive advantage rarely available to a young institution: direct access to one of India's largest integrated healthcare networks as a living laboratory for teaching, clinical exposure, and translational research. Students are not trained in theoretical isolation; they are trained with a functioning hospital ecosystem, and the clinical and technological problems it generates, close at hand.

The School of Health Sciences, and within it the Department of Biomedical Sciences, embodies this conviction most directly. In the few years since its founding, the Department has built academic programmes that respond to the changing shape of biomedical and health-informatics practice, formed partnerships with institutions of national and international standing, and created pathways for undergraduate and postgraduate students to participate in research from their very first semesters.

The University's commitment to the Department is expressed in three concrete ways: sustained investment in faculty recruitment across emerging biomedical disciplines; institutional support for the international placements and joint certifications that now define its postgraduate programmes; and encouragement of the community-facing outreach — from National Science Day to rare-disease awareness programmes — that connects the Department's scientific work to the public it ultimately serves.

This digital book is offered as a record of that journey — its programmes, its people, its research, and its outcomes — and as an invitation to prospective students, collaborators, and well-wishers to engage with a Department that continues to grow in ambition and impact.

— *Department of Biomedical Sciences, SoHS, The Apollo University*

SECTION 2

Department at a Glance

Establishment, programmes, academic scope

The Department of Biomedical Sciences functions within the School of Health Sciences at The Apollo University, Chittoor, Andhra Pradesh. It brings together biotechnology, genetics, molecular biology and health informatics under a single academic roof, with the explicit aim of training students who can work fluently across laboratory science, clinical data, and emerging health technologies.

The Department is led by Prof. R. Satyanarayana, Professor and Head, who joined the University in 2019 and has since built a faculty team spanning cancer biology, structural bioinformatics, nanomaterials, public health, and computational genomics. The Department offers five academic programmes at the undergraduate, postgraduate and doctoral levels, and has, within a short span, established formal academic and research collaborations with institutions including the Indian Institutes of Technology (Hyderabad, Madras, Tirupati and Ropar), the Indian Institute of Science, Monash University (Australia), and Brigham and Women's Hospital–Harvard Medical School (USA).

Geographically, the Department benefits from a location in the Chittoor–Tirupati corridor of Andhra Pradesh, placing it within easy reach of Sri Venkateswara University, Sri Venkateswara Institute of Medical Sciences, and IISER Tirupati — all of which already feature among its active teaching and research partners — while remaining connected, through the wider Apollo Hospitals network and its Chennai, Hyderabad and Bengaluru academic corridors, to India's principal biomedical and health-technology hubs. Each of these pillars is documented in the sections that follow.

At a glance

Parent institution	The Apollo University, Chittoor, Andhra Pradesh
School	School of Health Sciences
Head of Department	Prof. R. Satyanarayana (joined 2019)
Academic building	Dr. Prathap C. Reddy Knowledge Centre, main campus
Academic programmes	5 (four UG/PG programmes plus PhD, full- and part-time)
Faculty strength	8 full-time faculty across Professor, Associate Professor and Assistant Professor ranks
Key collaborators	Harvard Medical School / BWH, Monash University, IIT-Hyderabad/Madras/Tirupati/Ropar, IISc Bangalore, IISER Tirupati, University of Hyderabad
International recognition	First Indian university to be admitted to the International Medical Informatics Association (IMIA), Geneva
Quality benchmark	Academic and administrative practices reviewed against ISO 21001:2018 (Section 21)

SECTION 3**Vision, Mission & Objectives***Strategic direction***Vision**

To be recognised as a centre of excellence in biomedical education and research that produces graduates capable of translating laboratory and computational discovery into measurable improvements in human health.

Mission

- Deliver undergraduate and postgraduate curricula in biotechnology, genetics and molecular biology, and health informatics that combine rigorous fundamentals with hands-on research experience.
- Build a faculty-led research culture spanning cancer biology, genomics, nanomaterials, public health and artificial intelligence in healthcare.
- Extend every student's training beyond the classroom through internships, joint certifications and international placements with partner universities and hospitals.
- Embed ethics, data-privacy awareness and professional standards into biomedical and health-informatics training from the first year onward.
- Contribute to the health and scientific literacy of the wider community through outreach, public engagement and school-level science programmes.

Objectives

- Sustain a research-active faculty whose work is published in peer-reviewed, Scopus- and Web of Science-indexed journals.
- Grow the Department's network of institutional MoUs to widen internship and joint-research opportunities for students.
- Strengthen the Honours by Research pathway as a distinctive feature of undergraduate education.
- Increase the proportion of graduates progressing to higher education, research positions, or health-technology careers.
- Translate departmental research into demonstrable local impact, in the manner of the AI-enabled hospital ecosystem now operating at Chittoor District Headquarters Hospital (Section 11).
- Maintain the Department's quality-management practices at or above the ISO 21001:2018 benchmark against which it has already been reviewed (Section 21).

Core values

Scientific rigour	Evidence-based teaching and research, held to the standards of peer-reviewed publication.
Integrity & ethics	Honest conduct of research involving human participants, data, and biological material.
Collaboration	Openness to partnership across institutions, disciplines, and national boundaries.
Innovation	Active pursuit of new tools — from AI to nanomaterials — in service of health outcomes.
Social responsibility	A standing commitment to community health literacy and scientific outreach.

SECTION 4

Academic Portfolio*All five programmes*

The Department's academic portfolio is designed as a continuum in which undergraduate students trained in biotechnology and genetics can progress into postgraduate specialisations in biotechnology or health informatics, and onward into doctoral research within the same research groups that mentored them as undergraduates.

Programme	Duration	Level
B.Sc. Biotechnology	3 and 4 years	Undergraduate
B.Sc. Genetics and Molecular Biology	3 and 4 years	Undergraduate
M.Sc. Biotechnology	2 years	Postgraduate
M.Sc. Health Informatics and Analytics	2 years	Postgraduate
PhD (Health Sciences)	Full-time / Part-time	Doctoral

The four-year undergraduate options carry an embedded Honours by Research track (Section 5), giving high-performing students a fourth year devoted substantially to an independent research project under faculty supervision. The M.Sc. in Health Informatics and Analytics is distinguished by its structured international component, including joint certification with Monash University and a Harvard Medical School / Brigham and Women's Hospital internship placement (Sections 6 and 14).

Programme profiles

- B.Sc. Biotechnology — Foundational training in cell biology, biochemistry, microbiology and genetic engineering, building toward laboratory techniques used in industry and research. The four-year track feeds directly into the Honours by Research pathway; three-year graduates progress readily into M.Sc. Biotechnology or allied postgraduate study.
- B.Sc. Genetics and Molecular Biology — A curriculum centred on classical and molecular genetics, genomics, and bioinformatics, oriented toward diagnostic and research careers. Recent graduates have moved into roles such as Genome Analyst and Genetic Counsellor at MedGenome, Bangalore, and into postgraduate study at institutions including Tamil Nadu Central University (Section 15).
- M.Sc. Biotechnology — A research-intensive two-year specialisation in which postgraduate students are embedded in active faculty laboratories from their first semester, working alongside PhD scholars on projects in cancer biology, nanomaterials, and computational biology (Section 6).
- M.Sc. Health Informatics and Analytics — The Department's flagship postgraduate programme, combining health-data systems and artificial-intelligence methods with guaranteed international exposure through joint certification with Monash University and a placement pathway to Harvard Medical School / Brigham and Women's Hospital (Section 6).
- PhD (Health Sciences) — Full-time and part-time doctoral study across the Department's active thrust areas: cancer stem cell biology, structural bioinformatics, nanomaterials, public health epidemiology, and AI in healthcare, supervised by faculty with sustained, externally funded research programmes (Sections 10 and 11).

SECTION 5

Honours by Research Framework*UG academic model*

Students admitted to the four-year B.Sc. Biotechnology or B.Sc. Genetics and Molecular Biology programmes may opt into an Honours by Research track in their final year, consistent with the four-year undergraduate structure enabled under India's National Education Policy 2020. In place of a purely coursework-based fourth year, Honours by Research students undertake a substantial, faculty-mentored research project — often embedded in an active laboratory, an internship placement, or a collaborating institution's research group — culminating in a dissertation and, where the work merits it, a peer-reviewed publication.

The framework is intended to give undergraduates authentic exposure to the research process — hypothesis formulation, experimental or computational design, data analysis, and scientific writing — well before they enter postgraduate study. Recent Honours by Research placements have taken students into laboratories at IIT Ropar, IISc Bangalore, and Monash University, and the model has already produced the Department's first confirmed case of a graduate proceeding directly into a competitive overseas master's programme (Section 14).

Framework at a glance

- Available to: four-year B.Sc. Biotechnology and B.Sc. Genetics and Molecular Biology students who meet the Department's academic threshold.
- Structure: a mentored, semester-long or year-long independent research project replacing part of the standard fourth-year coursework.
- Timeline: project supervisor and topic confirmed early in Year 4; a mid-year progress review; dissertation submission and viva voce at year end.
- Mentorship: supervised jointly by departmental faculty and, where the project is hosted externally, by the partner institution's research guide.
- Evaluation: assessed on research dissertation, supervisor evaluation, and, where the work is presented externally, conference or publication outcomes.
- Outcome: a research dissertation, with publication or conference presentation encouraged where results allow, and a documented research record that strengthens postgraduate and international applications.

Recent Honours by Research placements

Student(s)	Programme	Host laboratory	Project focus
Ms. Shaik Gulnaz	B.Sc. BMS	IIT Tirupati, Dept. of Mechanical Engineering	3D bioprinting of heart tissues
Ms. J. Sirisha / Ms. R. Mounika	B.Sc. GMB	Dr. Reddy's Institute of Life Sciences, Hyderabad	Plant biotechnology / cancer biology
Mr. A. Bhanu Prakash / Mr. V. Lavan Kumar	B.Sc. GMB	Dr. Reddy's Institute of Life Sciences, Hyderabad	Malaria research / genetic engineering
Ms. Aditi Jha	B.Sc. GMB (Honours by Research)	Monash University Malaysia	Curcumin analogues as anti-cancer agents
Ms. Sharannya Pattnayak, Mr. Thushar Bhogal, Ms. D. K. Preethee Sharma	B.Sc. BMS / GMB	IIT Ropar, RNA Biology laboratory	One-year project placement in RNA biology

The benefits of this early research immersion are already visible: Ms. Aditi Jha's Honours by Research work led directly to a research internship at Monash University Malaysia and, subsequently, to her admission to an MSc in Synthetic Biology and Biotechnology at the University of Edinburgh — the Department's first graduate to be admitted to a foreign university for higher education (Section 14).

SECTION 6**Postgraduate Education***M.Sc. Biotechnology and M.Sc. Health Informatics and Analytics*

M.Sc. Health Informatics and Analytics

The two-year M.Sc. in Health Informatics and Analytics (HIA) is the Department's flagship postgraduate programme and its most internationally connected. Students are jointly certified with Monash University, Australia, during their second and fourth semesters, and work on artificial-intelligence-in-healthcare projects at Monash's Faculty of Information Technology. A parallel track sends students to Brigham and Women's Hospital, Harvard Medical School, Boston, for a twelve-month data-science internship — an opportunity that has already placed several Apollo University students at one of the world's leading academic medical centres.

Further placements route fourth-semester HIA students to the Indian Institute of Technology, Hyderabad, under the Center for Healthcare Entrepreneurship, to Monash University's Clayton campus in Melbourne, and through a separate agreement to Maastricht University in the Netherlands for a twelve-month internship in clinical data science and cloud computing. Within India, a training-and-placement pathway with IIT-Tirupati allows students to undertake six-month project work in the Department of Computer Science.

M.Sc. Biotechnology

The two-year M.Sc. Biotechnology programme extends the undergraduate biotechnology and genetics curriculum into specialised, research-intensive coursework, preparing graduates for doctoral study or careers in biotechnology, pharmaceutical and diagnostic industries. Postgraduate biotechnology students are integrated into the Department's active research groups from their first semester, working alongside PhD scholars on projects spanning cancer stem cell biology, nanomaterials, and computational biology.

SECTION 7

Faculty & Academic Leadership

Faculty strength and expertise

The Department's academic strength rests on a compact, research-active faculty of eight, each carrying an active portfolio of publications, sponsored projects, or patents. International academic identifiers — Scopus Author IDs, ORCID, and Web of Science ResearcherIDs — place their scholarship on the global record.

8

Prof. R. Satyanarayana

Professor & Head of Department | Joined 2019

RESEARCH & EXPERTISE

Cancer stem cells and metastasis; 3D cell culture and tissue engineering; nutraceuticals; CKD epidemiology; health informatics and AI in clinical risk prediction.

Dr. G. Gopikrishna

Associate Professor | Joined 2022

RESEARCH & EXPERTISE

AI-driven hospital healthcare ecosystems; RPA and data dashboards; NMR-based computational biology; bioinformatics.

Dr. R. Sriroop Reddy

Assistant Professor | Joined 2023

RESEARCH & EXPERTISE

Molecular modelling and dynamics; cancer biology; genomics and variant analysis; anti-microbial research.

Dr. C. Sai Kalyani Yogini

Assistant Professor | Joined 2023

RESEARCH & EXPERTISE

Marine plant bioactives; anti-obesity nutraceuticals; antioxidant and metabolic therapeutics; environmental sustainability.

Dr. M. Jeevan Kumar Madhavan

Assistant Professor; Assistant Director, Academic Affairs
Joined 2024

RESEARCH & EXPERTISE

Rare genetic diseases; cytogenomics and genomics; neurodevelopmental disorders.

Dr. Venkata Prasad Upadrasta

Assistant Professor | Joined 2025

RESEARCH & EXPERTISE

Community health; adolescent and maternal health; nutrition epidemiology; seroepidemiology.

Dr. A.V.R. Krishna Rao

Assistant Professor | Joined 2025

RESEARCH & EXPERTISE

Multimodal contrast agents; photothermal neural scaffolds; point-of-care nanosensors.

Dr. K. Sreedhar Naik

Assistant Professor | Joined 2026

RESEARCH & EXPERTISE

Cardiovascular & Molecular Genetics; Computational Biology; Clinical Trials.

SECTION 8

Teaching & Learning Ecosystem*Academic methodology*

Teaching in the Department is deliberately structured to move students from foundational classroom learning toward independent, research-grade practice well before graduation. Lecture-based instruction in core biotechnology, genetics and health-informatics subjects is paired from an early stage with laboratory practicals, journal-club discussions of current literature, and — for eligible students — direct participation in faculty research projects.

Key features of the teaching model

- Faculty-mentored project work embedded into the curriculum from the third year onward, rather than reserved for a single capstone semester.
- Structured semester-abroad and semester-at-partner-institution options for M.Sc. HIA students, integrating international coursework and supervised project work into the regular academic calendar.
- Continuing professional development for faculty, including certification programmes such as the NBEMS "AI in Healthcare" course completed by three Department faculty members.
- Regular exposure of students to visiting experts from industry and academia, including a keynote on generative AI in the life sciences delivered to the Department by a Director of Data Science and Applied AI at a global technology company.
- Peer teaching moments in which senior undergraduates and M.Sc. students train hospital doctors and clinical staff on AI-based diagnosis, patient-monitoring and disease-prediction tools developed as part of their coursework.

A departmental keynote on generative AI in the life sciences, delivered as part of the Department's speaker series.

SECTION 9

Laboratory & Infrastructure

Facilities and practical learning

The Department is housed within the Dr. Prathap C. Reddy Knowledge Centre on the main campus of The Apollo University in Chittoor — a purpose-built academic block that brings teaching laboratories, faculty research space, seminar rooms and digital-learning infrastructure together under one roof.

Undergraduate and postgraduate students in biotechnology and genetics work in wet laboratories equipped for molecular biology, cell culture and biochemical analysis, while M.Sc. Health Informatics and Analytics students train on data-analytics and health-informatics platforms that mirror tools used in partner hospital and industry settings. Smart classrooms with video-conferencing capability support the Department's joint teaching sessions with international partners, including live sessions with faculty at Monash University and other collaborating institutions.

Because a meaningful share of the Department's practical training takes place at partner sites — including IIT laboratories, Dr. Reddy's Institute of Life Sciences, and hospital informatics units — the Department treats its infrastructure as extending beyond the physical campus to the network of laboratories and clinical-data environments accessible through its institutional collaborations (Section 12).

SECTION 10

Research Ecosvstem

SECTION 10

Research Ecosystem

Research areas, projects and publications

Across its eight faculty members, the Department's published and sponsored research spans molecular oncology, structural bioinformatics, nanomaterials, environmental and nutritional science, public health epidemiology, and artificial intelligence in clinical settings. Collectively, departmental faculty are named on roughly 105 peer-reviewed publications indexed in Scopus and/or Web of Science, more than 35 completed or ongoing sponsored research projects funded by agencies including SERB-DST, ICMR, UGC and PM-USHA, and nine patents or patent applications.

Faculty member	Thrust areas	Publications■	Projects■	Patents
Prof. R. Satyanarayana	Cancer stem cells; CKD epidemiology; health informatics & AI	68	11	8
Dr. G. Gopikrishna	Photonics/sensors; AI healthcare systems; computational biology	11	8	0
Dr. R. Siroop Reddy	Molecular dynamics; cancer genomics; anti-microbial research	14	1	0
Dr. C. Sai Kalyani Yogini	Marine bioactives; nutraceuticals; environmental sustainability	9	2	1
Dr. M. Jeevan Kumar Madhavan	Rare genetic diseases; cytogenomics	15	6	0
Dr. Venkata Prasad Upadrastra	Community & public health; nutrition epidemiology	20	9	0
Dr. A.V.R. Krishna Rao	Nanomaterials; point-of-care sensors	4	0	1
Dr. K. Sreedhar Naik	Cardiovascular & Molecular Genetics, Computational Biology, and Clinical Trials	11	4	0

SECTION 11**Research & Innovation***AI, bioinformatics, biotechnology, digital health*

AI-enabled healthcare delivery

Dr. G. Gopikrishna leads a multi-year initiative (2024–2026) to transform healthcare delivery at Chittoor District Headquarters Hospital using an integrated IT ecosystem — connecting patient registration, diagnostics, laboratory reporting and clinical records through robotic process automation, web automation, and centralised data dashboards. The project has reduced manual documentation workload, improved compliance reporting, and created a scalable framework intended for adoption across multiple hospital and research healthcare environments. The same group's earlier COVID Laboratory Automation System, built during the pandemic at IISER Berhampur, was open-sourced and adopted at testing centres nationally.

Chronic Kidney Disease and machine learning

Prof. R. Satyanarayana's research group runs a longitudinal ICMR-funded study of risk factors for declining kidney function (eGFR) in Prakasam district, Andhra Pradesh, alongside a parallel ICMR prevalence study in Supebeda, Chhattisgarh, and a machine-learning model for CKD risk in the Chandragiri area of Tirupati district — extending the group's long-standing work on CKD of unknown aetiology in the Uddanam region, published in *Kidney International Reports*.

Genomics, bioinformatics and rare disease

Dr. M. Jeevan Kumar Madhavan's cytogenomics work spanning FISH-based chromosomal analysis, exome/genome segregation studies, and de novo variant discovery in neurodevelopmental cohorts — connects the Department to clinical genetics practice, while Dr. R. Sriroop Reddy's molecular-dynamics simulations of cancer-associated mutations (including in MSH2, NOD2 and Rab-GTPase-activating protein) sit at the interface of structural biology and computational bioinformatics.

Healthcare Technology Innovation Centre (HTIC)

The Department's M.Sc. HIA students have engaged with the Healthcare Technology Innovation Centre, a joint initiative of IIT Madras and the Department of Biotechnology, Government of India, reflecting the Department's broader strategy of connecting students to national centres of excellence in health technology.

SECTION 12

Institutional Collaborations*IITs, IISc, Monash, Harvard/BWH, and more*

Since its establishment, the Department has prioritised formal collaboration over isolated excellence, building a network of memoranda of understanding and working relationships that let students and faculty move between The Apollo University and leading academic, research and industry environments in India and abroad.

Institution	Country	Nature of collaboration
Brigham and Women's Hospital, Harvard Medical School	USA	Student research internships; Health Informatics
Monash University	Australia	Joint certification, AI-in-healthcare projects, PhD placements
RWTH Aachen University	Germany	Academic collaboration
Maastricht University	Netherlands	12-month internship in clinical data science and cloud computing
University of Edinburgh	UK	Postgraduate admission pathway (MSc Synthetic Biology & Biotechnology)
IIT Hyderabad, Madras, Tirupati, Ropar	India	Student project placements and semester-long research
Indian Institute of Science (IISc), Bangalore	India	6-month research internships
IISER Tirupati	India	Academic and research engagement
University of Hyderabad	India	Summer internships and research training
Dr. Reddy's Institute of Life Sciences	India	Summer internships and research training
Aurobindo Pharma	India	MoU for student internships
AIIMS Bhubaneswar	India	Research internships
International Medical Informatics Association (IMIA)	Switzerland	First Indian university admitted to IMIA

SECTION 13

Internship & Experiential Learning Network*Institutional partnerships*

Experiential learning is treated as a graduation requirement in spirit if not always in name: cohort after cohort of undergraduate and postgraduate students move through structured internships at partner hospitals, research institutes and universities, most of them arranged through the Department's own MoU network.

- B.Sc. BMS and B.Sc. GMB students (2023–24 batch) completed summer internships at the University of Hyderabad and at Dr. Reddy's Institute of Life Sciences, and a six-day molecular biology training programme at Sri Venkateswara University, Tirupati.
- Fourth-semester B.Sc. students have secured six-month project placements at IIT-Tirupati (Department of Mechanical Engineering, 3D bioprinting of heart tissue) and at Dr. Reddy's Institute of Life Sciences.
- Seven fourth-semester B.Sc. BMS and GMB students secured a six-month internship at the Indian Institute of Science, Bangalore, under Prof. B.S. Rajnikanth (Electrical Engineering), with internal mentorship from Dr. G. Gopikrishna.
- 2025-admitted B.Sc. Biotechnology and Genetics students undertook summer internships at Sri Venkateswara Institute of Medical Sciences (Endocrinology), Sri Venkateswara University (Virology), Rajiv Gandhi Institute of Medical Sciences (Ongole), and the Indian Institute of Sustainable Development, New Delhi.
- A cohort of B.Sc. BMS students undertook a one-year project placement in the RNA Biology laboratory at IIT Ropar.

B.Sc. Biomedical Science and B.Sc. Genetics and Molecular Biology students (2023-24 batch) successfully completed Summer Internships at the University of Hyderabad, from May to June 2024.

B.Sc. Biomedical Science and B.Sc. Genetics and Molecular Biology students (2023-24 batch) successfully completed summer internships at Dr. Reddy's Institute of Life Sciences, from May to June 2024.

B.Sc. Biomedical Science and B.Sc. Genetics and Molecular Biology students (2023-24 batch) successfully completed a six-day training programme in molecular biology at Sri Venkateswara University, Tirupati, from 4 April to 10 April 2024.

Internationalisation*Global academic and research exposure*

International exposure is built into the Department's postgraduate structure rather than offered as an optional extra. M.Sc. Health Informatics and Analytics students are jointly certified with Monash University, Australia, during their programme, and a defined cohort proceeds each year to a twelve-month research internship at Brigham and Women's Hospital, Harvard Medical School, Boston — reported to be the first such placement secured by any student of The Apollo University.

- Ms. B. Sowmya became the first Apollo University student to secure an international internship at Brigham and Women's Hospital, Harvard Medical School, Boston.
- G C M Jyothi, Dhananjayan Suganya and Shaik Salma were awarded one-year internships at Brigham and Women's Hospital / Harvard Medical School (ranked #1 globally among medical schools by QS).
- Sri Prajna Varma Gottumukkala, Hemangi Santosh Sawant and K H Sandeep secured internships at Monash University (QS #42), Melbourne, Australia.
- Aditi Jha (B.Sc. Genetics and Molecular Biology, Honours by Research) became the first Apollo University student admitted to a foreign university for higher education — an MSc in Synthetic Biology and Biotechnology at the University of Edinburgh (34th in the 2026 QS World University Rankings) and separately secured a research internship at Monash University Malaysia, studying curcumin analogues as anti-cancer agents.
- 2025-admitted M.Sc. HIA students undertake their fourth semester at Monash University's Faculty of IT, Clayton Campus, Melbourne, under Prof. Chris Bain.

HEMANGI SANTOSH SAWANT <i>Area of the Research:</i> AI models for medical image diagnosis and analysis	G. SRI PRAJNA VARMA <i>Area of the Research:</i> Medical Imaging Analytics	Sandeep Kuruba Haridasappa <i>Area of the Research:</i> Value from AI enabled Digital Therapeutics

Sri Prajna Varma Gottumukkala, Hemangi Santosh Sawant, and K H Sandeep have secured internships at Monash University (Global QS ranking: #42), Melbourne, Australia.

Congratulations!

Ms. Aditi Jha
B.Sc. Genetics and Molecular Biology
Secured one year Internship at
Monash University Malaysia
Project Work: Curcumin analogues as
anti-cancer drugs

Ms. Shaina Mohammad

Ms. K. Rishika

Mr. J. Vinay

Ms. Anandha Lakshmi

The 2025-admitted cohort of M.Sc. Health Informatics and Analytics students has been selected to undertake their fourth semester at the Faculty of IT, Monash University, Clayton Campus, Melbourne, Australia, under the esteemed guidance of Prof. Chris Bain.

Ms. D. Angel

Dr. Kripa Thomas

Ms. A. Charanya

The 2025-admitted cohort of M.Sc. Health Informatics and Analytics students has been selected to undertake their fourth semester at the Indian Institute of Technology Hyderabad, under the esteemed guidance of Prof. Renu John, Head of the Center for Healthcare Entrepreneurship (CfHE).

SECTION 15

Academic Outcomes

Higher education and career progression

Outcomes for the Department's early graduating cohorts already show the two trajectories the curriculum is designed to produce: direct entry into industry and health-technology careers, and progression to competitive postgraduate study in India and abroad.

Representative outcomes — 2022–23 batch

- Ms. J. Sirisha and Ms. R. Mounika (B.Sc. GMB) — Genome Analyst and Genetic Counsellor respectively, MedGenome, Bangalore.
- Mr. V. Lavan Kumar (B.Sc. GMB) — Genome Analyst, MedGenome, Bangalore.
- Ms. Shaik Gulnaz and Mr. A. Bhanu Prakash (B.Sc. BMS / GMB) — progressed to M.Sc. Biotechnology at Tamil Nadu Central University.
- Mr. Md. Omer Farooq (B.Sc. BMS) — Junior Assistant, Wanaparthy District Court.

Student's achievements of B.Sc. BMS and B.Sc. GMB - 2022-23 batch

Ms. Shaik Gulnaz
B.Sc. BMS

Pursuing M.Sc. Biotechnology @ Tamil Nadu Central University

Mr. A. Bhanu Prakash
B.Sc. GMB

Pursuing M.Sc. Biotechnology @ Tamil Nadu Central University

Mr. Md. Omer Farooq
B.Sc. BMS
Working as Junior Assistant
at Wanaparthy District Court

Ms. J. Sirisha
B.Sc. GMB
Genome Analyst @ MedGenome bangalore

Ms. R. Mounika
B.Sc. GMB
Genetic Counsellor @ MedGenome bangalore

Mr. V. Lavan Kumar
B.Sc. GMB
Genome Analyst @ MedGenome bangalore

Students' achievements in B.Sc. BMS and B.Sc. GMB — 2022–23 batch

Placements and awards

- Mr. K.H. Sandeep (M.Sc. HIA, 2023–25 batch) secured a placement as IT Executive at Apollo Hospitals with an annual package of ₹9.00 lakhs.
- Dr. Hemangi Santhosh Sawant (M.Sc. HIA, 2023-admitted batch) received the Chancellor's Gold Medal for the programme and is also working as a senior health data scientist at Apollo Clinical AI, Hyderabad.

Convocation: the Chancellor's Gold Medal in M.Sc. Health Informatics and Analytics being presented to Dr. Hemangi Santhosh Sawant.

SECTION 16

Student Strength & Growth*Cohort statistics*

The Department's student community has grown across successive admission cycles since its first intakes, with cohorts now active from the 2022–23 through 2025-admitted batches across all five programmes. Growth has been accompanied — not followed — by expanding research and internship capacity, so that each larger cohort has had at least as many placement and project opportunities per student as the one before it.

Active cohorts (illustrative)

Batch	Programme(s) active	Notable milestone
2022–23	B.Sc. BMS, B.Sc. GMB	First graduating cohort placements
2023–24 / 2023-admitted	B.Sc. BMS/GMB, M.Sc. HIA	First Harvard/BWH & Monash internships
2025-admitted	All five programmes	Largest intake to date across UG and PG

SECTION 17

Achievements & Recognition*Institutional achievements through students*

- SOLVATHON 2024, IIT Alumni Centre, Bangalore — Sri Prajna Varma Gottumukkala, Hemangi Santosh Sawant and G C M Jyothi won first prize and a cash award of ₹1,00,000.
- TARIGYM 2024 — Hemangi and Sri Prajna (M.Sc. HIA, second year) won second prize; Prasanna and Likhitha (M.Sc. HIA, first year) won third prize.
- Ms. Sharanya Pattnaik (B.Sc.) received the Best Poster Prize for work on microbiome models in precision oncology.
- The University Drama Team, including seven Department students, won first prize and ₹50,000 at a competition hosted by Alliance University, Bangalore.
- Three Department faculty members — Prof. R. Satyanarayana, Dr. U.V. Prasad and Dr. A.V.R. Krishna Rao — completed the NBEMS "AI in Healthcare" certification, part of a course whose attendance was recognised with a Guinness World Records title.
- The Apollo University became the first Indian university admitted to the International Medical Informatics Association (IMIA), Geneva, with Prof. R. Satyanarayana as academic representative.

Team from the Department's M.Sc. Health Informatics and Analytics 2023 batch receiving the first-prize award at SOLVATHON 2024, IIT Alumni Centre, Bangalore.

Ms. Hemangi and Ms. Sri Prajna (M.Sc. Health Informatics, Second Year) secured the Second Prize in TARIGYM 2024. Ms. Prasanna and Ms. Likhitha (M.Sc. Health Informatics, First Year) secured the Third Prize in TARIGYM 2024.

Ms. Sharanya Pattnaik (B.Sc.) received the Best Poster Prize for work on microbiome models in precision oncology.

Seven students of the Department — Ms. Divya, Ms. Roshne, Ms. Gouri, Dr. Kripa Thomas, Mr. Thushar Bhogal, Mr. Victor Abhishek, and Mr. Gourav Rajasekhar — proudly represented The Apollo University as part of the University Drama Team. Their outstanding performance earned them the First Prize and a cash prize of ₹50,000 at Alliance University, Bangalore.

International Medical
Informatics Association

The Apollo University

IMIA Academic Representative:

Dr. R. Satyanarayana
Professor and Head, Department of Biomedical Sciences, School
of Health Sciences

Website

The Apollo University, Chittoor, INDIA

The Apollo University — The First Indian University to Join the International Medical Informatics Association (IMIA), Geneva, Switzerland.

Three faculty members from the Department — Prof. R. Satyanarayana, Dr. U.V. Prasad and Dr. A.V.R. Krishna Rao — completed the "AI in Healthcare" certification course offered by NBEMS, Government of India. The course's attendance set a Guinness World Record.

Ms. Kavya (B.Sc. Biomedical Sciences, 2023 batch) won the First Prize at the Ideathon organised by the MoE's Innovation Council at The Apollo University.

2025-batch undergraduate students undertook an industrial visit to AMTZ Vizag, where they were exposed to up-to-date technology and startup innovations.

విశాఖంధ్ర

అంతర్జాతీయ ఏఐ పోటీలో అపోలో విద్యార్థి సత్తా

గూగుల్ క్లౌడ్ హ్యాకథాన్‌లో ప్రథమ బహుమతి

విశాలాంధ్ర-చిత్తూరు: అంతర్జాతీయ స్థాయిలో నిర్వహించిన 'గూగుల్ క్లౌడ్ ర్యాపిడ్ ఏజెంట్ హ్యాకథాన్' పోటీలో అపోలో యూనివర్సిటీ విద్యార్థి వినయ్ ప్రథమ బహుమతి సాధించి విశ్వవిద్యాలయ ప్రతిష్ఠను ప్రపంచస్థాయికి తీసుకెళ్లారు. ఆయన

రూపొందించిన 'క్రెసిస్ రూట్ ఏఐ' ప్రాజెక్ట్ కు 5,000 అమెరికన్ డాలర్ల (సుమారు రూ. 4.3 లక్షలు) నగదు బహుమతి లభించింది. అత్యవసర పరిస్థితుల్లో ఉన్న రోగులను అతి తక్కువ సమయంలో సరైన ఆసుపత్రికి చేర్చి, చికిత్స అలస్యాన్ని తగ్గించేందుకు కృత్రిమ మేధ ఆధారంగా ఈ ప్రాజెక్టును వినయ్ రూపొందించినట్లు బయోమెడికల్ సైన్సెస్ విభాగాధిపతి ప్రొఫెసర్ ఆర్. సత్యనారాయణ తెలిపారు. ఈ ఘనవిజయం సాధించిన వినయ్ ను యూనివర్సిటీ వైస్ ఛాన్సలర్ డాక్టర్ నితీన్ ఎం. నాగార్జున్ ప్రత్యేకంగా అభినందించారు. విద్యార్థుల్లో పరిశోధన, సరికొత్త ఆవిష్కరణలను ప్రోత్సహించడంలో అపోలో యూనివర్సిటీ ఎల్లప్పుడూ ముందుంటుందని ఆయన పేర్కొన్నారు. ఈ కార్యక్రమంలో ప్రొ. వైస్ ఛాన్సలర్ డాక్టర్ ఆర్పిఎస్ జె. అగస్తీన్, రిజిస్ట్రార్ ఎస్. అనిల్ కుమార్, ప్రోగ్రామ్ కో-ఆర్డినేటర్ డాక్టర్ జి. గోపీకృష్ణ, ప్రాజెక్ట్ కో-ఆర్డినేటర్ డాక్టర్ ఆర్. శ్రీరామ్ రెడ్డి తదితరులు పాల్గొన్నారు.

THE APOLLO UNIVERSITY STUDENT WINS GLOBAL AI HACKATHON

First Prize at the Rapid Agent AI Hackathon by Google Cloud.
WON USD 5,000

MR. VINAY

M.Sc. Health Informatics and Analytics (2nd Year),
School of Health Sciences, The Apollo University

Mr. Vinay J, M.Sc. Health Informatics and Analytics, won the First Prize in the Google AI Hackathon.

Mr. Vinay J and Team, M.Sc. Health Informatics and Analytics, won the Second Prize at Solvathon 2026, organised by the ARI.

Mr. Vinay J, Dr. Y. Naveen Babu, Mr. Yeswanth and Mr. A.G. Visaal, M.Sc. Health Informatics and Analytics, 2025 batch, won the Second Prize at Synapse 26 — Neuroscience Symposium, organised by IISER Tirupati.

Ms. Ananda Lakshmi, Ms. Renuka and Ms. Rishika, M.Sc. Health Informatics and Analytics, 2025 batch, won the first and second prizes at the Startup Idea competition organised by The Apollo University.

SECTION 18

Community Engagement*Outreach and social responsibility*

The Department treats public science engagement as a core responsibility rather than an occasional activity. Its most visible annual outreach effort is National Science Day, hosted on campus for school students from across the Chittoor region — an event that in its most recent edition drew more than 700 students from over 50 schools, with prizes distributed by the District Educational Officer and District Scientific Officer of Chittoor at a valedictory ceremony.

The Department has also partnered with the Agastya International Foundation to bring hands-on science activities to school children, and has hosted rare-disease awareness programmes in collaboration with national experts, including a national conference on rare diseases held on campus to improve public awareness, early diagnosis and treatment access.

The Apollo University, Chittoor,
cordially invites you to participate in the

NATIONAL SCIENCE DAY 2026

School Level Project Exhibition

Theme: Imagine • Investigate • Innovate • Inspire

Inauguration
 **28th February 2026 At 10.00 AM**
 **Auditorium, Dr. Prathap C Reddy Knowledge Centre**

Chief Patron

Dr. H Vinod Bhat
Vice Chancellor
The Apollo University

Chief Guest

Dr. Vasudharani Devanathan
Chair, Department of Biology
IISER Tirupati

Students are invited to showcase their innovative project ideas

Welcome to a Celebration of Young Scientific Talent!

SECTION 19

Academic & Scientific Events*Conferences, seminars, workshops*

- "Unlocking AI: A Practical Introduction to Generative AI" — departmental keynote by Dr. Aravind Chiruvelli, Director of Data Science and Applied AI, Walmart Global Tech (30 November 2024).
- International Conference on Biotechnology, Medicine and Cancer Therapeutics (ICBMCT 2024), Sri Venkateswara University, Tirupati, attended by four faculty members and a delegation of UG/PG students; Dr. C. Sai Kalyani Yogini chaired a judging session on applications in animal, plant, agricultural, microbial, environmental and industrial biotechnology.
- National Conference for Undergraduate Research in Biosciences, IISER Tirupati (16–17 December 2024), attended by Dr. S. Hemadri Reddy and Dr. C. Sai Kalyani Yogini.
- Faculty Development Programme session on "Pedigree Analysis of Rare Diseases", delivered by Dr. M. Jeevan Kumar to faculty of AIMSR and The Apollo University (1 October 2025).
- Students-Teachers Exhibition, National Council of Science Museums, Ministry of Culture, Government of India. Prof. R. Satyanarayana and Dr. G. Gopikrishna served as judges (28 December 2024).
- National Science Day 2025 and 2026 celebrations hosted on campus (Section 18).
- Visit and interaction session with Dr. Sujoy Kar, hosted for M.Sc. Health Informatics and B.Tech. students (20 December 2024).

Dr. Aravind Chiruvelli, Director of Data Science and Applied AI, Walmart Global Tech.

Dr. R. Satyanarayana and Dr. G. Gopikrishna served as judges for the Students-Teachers Exhibition organised by the National Council of Science Museums, Ministry of Culture, Government of India.

On 16 and 17 December 2024, Dr. S. Hemadri Reddy and Dr. C. Sai Kalyani Yogini attended the National Conference for Undergraduate Research in Biosciences at the Indian Institute of Science Education and Research Tirupati (IISER Tirupati).

National Science Day 2025 and 2026 Celebrations at The Apollo University

Dr. M. Jeevan Kumar, Assistant Professor, served as the resource person for "Pedigree Analysis of Rare Diseases", held on 1 October 2025 as part of the Faculty Development Programme (FDP) for the faculty members of AIMSR and The Apollo University.

On 20 December 2024, Dr. Sujoy Kar visited The Apollo University and interacted with the students of the M.Sc. Health Informatics and B.Tech. programmes.

SECTION 20**Technology-Enabled Healthcare Education***AI, HIA, digital health*

The M.Sc. Health Informatics and Analytics programme is the Department's clearest expression of technology-enabled healthcare education, training students simultaneously in health data systems, artificial intelligence methods, and clinical workflow, so that graduates can operate at the intersection of hospital practice and data science.

This orientation extends into faculty research and campus practice. Dr. G. Gopikrishna's AI-driven hospital ecosystem project at Chittoor District Headquarters Hospital gives HIA students a live, campus-adjacent case study in applying automation and analytics to real clinical operations. Students in the programme have, in turn, trained practising doctors on AI-based diagnosis, patient-monitoring and disease-prediction tools developed in their coursework — a knowledge-transfer exercise that the Department intends to repeat on a recurring basis, approximately every two months.

Complementing this, the Department's association with the International Medical Informatics Association and its students' placements at the Healthcare Technology Innovation Centre (IIT Madras / DBT) connect the programme to national and international communities of practice in digital health.

SECTION 21**Quality, Ethics & Professional Development***Standards and professional values*

An internal academic and administrative review found the Department's practices fully compliant with ISO 21001:2018 — the international standard for educational organization management systems — with a single, minor observation relating to reliance on digital rather than hard-copy lecture-diary records, reflecting the Department's broader shift toward consolidated digital documentation.

Professional and ethical development is reinforced through faculty certification (including the NBEMS "AI in Healthcare" course), through the Department's engagement with national bodies such as the National Council of Science Museums, and through its research portfolio's routine engagement with institutional ethics processes for studies involving human participants, particularly in the community-health and CKD-epidemiology projects led by Department faculty.

SECTION 22

Departmental Strengths

What differentiates the Department

-
- A genuinely international postgraduate pathway — joint certification and guaranteed internship access at Monash University and Harvard Medical School / BWH — rare among comparable Indian biomedical departments of similar size.
 - An Honours by Research undergraduate track that gives high-performing students authentic research experience for a full year before postgraduate study.
 - A research-active faculty publishing consistently in Q1-Q2 journals across oncology, genomics, nanomaterials and public health, with a combined portfolio approaching 105 publications and 35+ sponsored projects.
 - Direct translation of research into local impact, exemplified by the AI-driven hospital ecosystem deployed at Chittoor District Headquarters Hospital.
 - A dense internship network spanning IITs, IISc, ICMR units, and pharmaceutical and diagnostics companies, ensuring most students complete at least one substantive external placement before graduation.
 - Institutional recognition at the international level through IMIA membership, positioning the Department within a global health-informatics community.

SECTION 23

Future Roadmap*Expansion, research, collaborations, innovation*

- Deepen the AI-in-healthcare programme beyond Chittoor District Headquarters Hospital toward a scalable, multi-hospital digital-health framework, building on the existing pilot.
- Expand the Honours by Research pathway and track its graduates into postgraduate placements, building an evidence base for the model's effectiveness.
- Grow the roster of joint-certification and dual-placement postgraduate agreements beyond Monash University and Harvard Medical School / BWH to additional partner institutions in health informatics and biomedical research.
- Increase doctoral intake and faculty-led sponsored research, sustaining the momentum of current ICMR-, SERB-DST- and PM-USHA-funded projects.
- Broaden community-facing programmes — National Science Day, Agastya Foundation partnerships, and rare-disease awareness work into a more structured, recurring outreach calendar.
- Formalise the Department's quality-management practices, building on its ISO 21001:2018 compliance review, ahead of future accreditation milestones.
